Martin, Lisa, "'I've got a blank space, baby" - The teaching space and its impact on pedagogy" (2023). *The Innovative Library Classroom (TILC) Conference*. 7.  
<https://scholarworks.wm.edu/tilc/2023/presentations/7>

This Event is brought to you for free and open access by the Conferences, Symposia and Events at W&M ScholarWorks. It has been accepted for inclusion in The Innovative Library Classroom (TILC) Conference by an authorized administrator of W&M ScholarWorks. For more information, please contact [scholarworks@wm.edu](mailto:scholarworks@wm.edu).

*“I’ve got a blank space,  
baby” - the teaching space  
and its impact on pedagogy*

Lisa Martin, Assistant Program Director for  
Instruction and Outreach Services, UC San Diego  
Library

# Agenda

01

## *Common Ground*

Models, stats, and some caveats and limitations

03

## *Pedagogy*

Specific pedagogical techniques to consider

02

## *Instructors/Learners*

Shared and unique needs of instructors and learners

04

## *Future Planning*

Ideas for future planning ('know better, do better')

An illustration of four diverse people (two men and two women) standing in a row, holding a large white banner. The banner contains the text "A quick story to set the stage". The background is a solid light brown color. There are decorative elements: a blue circle with red and brown wavy lines in the top left; a rainbow and a yellow circle in the top right; and a white circle with blue, brown, and orange wavy lines in the bottom left. There are also several brown circles scattered in the bottom right corner.

A quick story to set the stage

## *A note on language choices and positionality*

Language choice is made here with deliberate intent. If an audience member would like to offer correction, please feel welcome. No one person can accurately represent the full spectrum of disability; we learn together. I speak today from the relative privilege of someone who is neurodivergent, with a chronic illness, and temporarily physically disabled.

01

*Common  
Ground*

# Two (of a few) Models of Disability

## Medical model

Disability is a physical or mental defect to be cured

## Socio-political Model

“Nothing about us without us”  
It’s about the environment, not the person

Friedensen et al. (2021)

# Some Numbers\*

\*a caveat first: in higher education, where only about  $\frac{1}{3}$  of students choose to disclose (and staff and faculty are rarely asked), our numbers of people with disabilities are not terribly accurate - but they are a starting point for further discussion

NCES (2022)

# Some (US) Numbers

## General Population

Between 13-26%  
(depending on  
how you define  
disability and  
whether you ask  
Census or the  
CDC)

## Students

19% (in 2015)

NCES

## Faculty

4% (in 2004)

NCES

## Staff

~5% (best guess  
based on 2022  
BLS numbers)

# Most Common Student Disabilities

1. ADD/ADHD 15%
2. Learning Disability -5%
3. Blindness/low vision -4%
4. Autism -3%
5. Deafness/hearing loss 2%
6. Mobility/Dexterity -1%
7. Speech or language disorder -1%

ACHA-NCHA (2022)

02

*Instructors/  
Learners*

# An intersection

## *Important to remember*

A person can have more than one disability (and more than one type of disability). It is not helpful to assume that a person will only have one need or will only require assistance along one axis. And of course, people of color with disabilities have a very different experience than white people with disabilities

# Library Instructors with physical disabilities

## Who?

Includes people with visible (low vision, Deaf, mobility impairment) and non-visible disabilities (chronic fatigue, etc.)

## Challenges

Accessibility; last-minute schedule changes; lack of support aids

## Unique Needs

Knowledge of space; back-up or substitute instructor; computer software/AV needs

# Library Instructors with mental disabilities

## Who?

Includes people with neurodivergence (autism, executive function disorders, etc.), learning disabilities, etc.

## Challenges

Internalized and external bias; lack of support aids

## Unique Needs

Training and understanding; quiet space or other aids

# Learners

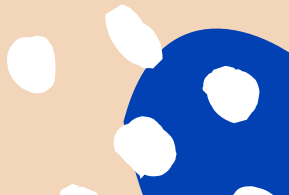

“Accessible Library Instruction in Practice”

“Higher Education Students with Disabilities Speaking out: Perceived barriers and opportunities of the Universal Design for Learning framework”

“Improving Distance Education for Students with Special Needs: A qualitative study of students’ experiences with an online library research course.”

“Classroom Accommodations Checklist”

03

*Pedagogy*

# *A Checklist to Start Us Off*

*Padlet*

[https://padlet.com/rz2qx7d6mr/  
checklist](https://padlet.com/rz2qx7d6mr/checklist)

## Competing Needs

What happens when a learner or instructor with one type of need is in the same space as a learner or instructor with a *diametrically opposed* need?

For example, a low vision instructor needs bright lights and strong contrast to be able to see - and a learner with autism needs dimmer lighting and a lower contrast to be able to focus

Remember: there is no one correct answer here

What would you do? (Note: the Autism Self Advocacy Network resource in the Works Cited has some good ideas for how to grapple with this issue!)

# *So how does this change things?*

Some common sense points to consider as you start to work on your pedagogy for a given course, tutorial, or curriculum:

- 1) Teaching a one-shot? Ask the instructor for relevant information on any learner who might have a specific need(s)
- 2) Be prepared to address the needs of learners who *don't* disclose
- 3) Think thoughtfully about your own needs as instructor and any co-instructors

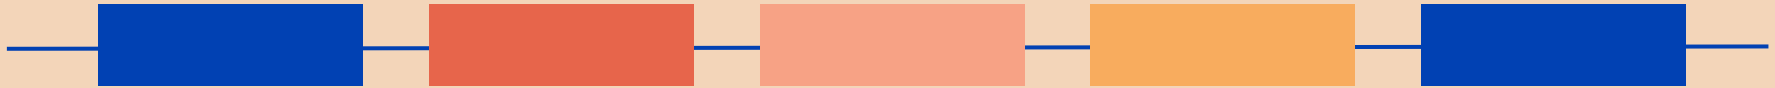

# Pedagogical Techniques

*Multiple means of representation*

*Active learning*

*Agenda and Scaffold takeaways tasks*

*Mind/Topic mapping*

*Inclusivity Options*

Frame active learning in terms of activities, not the active body

Verbalize and visualize, etc. Describe objects, search results, etc.

*Repetition*

Set an agenda, offer content + takeaways, repeat agenda and takeaways at the end

*Steps!*

Break tasks down into discrete steps and offer students the chance to view steps one chunk at a time

*Options*

Also offer students the chance to use a list or outline. Offer technology but don't require it

# Pedagogical Techniques

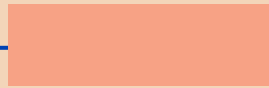

*Tutorials*

*Think-Pair-Share/Fishbowl*

*Group Discussion*

*Timed Activities*

*Assessment*

*Accommodations*

If there are timed or quiz-based sections, students may need accommodation

*Alternatives*

Give alternatives so students don't have to have a specific role or do mandatory sharing

*Inclusion*

Offer multiple ways to participate (chat, verbally, etc.)

*Remind*

Offer a timer and reminders for students who might need them

*Alternatives*

Offer students multiple ways to complete (not just handwritten) and time after for it

04

*Future  
Planning*

# Building an Inclusive Space

## Renovating

1. Go beyond ADA compliance
2. Determine what isn't possible
3. Ask your users (and non-users)
4. Ask your experts (including staff)
5. Conduct an accessibility audit

## From the ground up

- 1) Pick your architect carefully
- 2) Be involved early and often
- 3) Ask your users, non-users, experts, etc.
- 4) Be prepared to make hard choices
