BIBLIOGRAPHY OF THE PHYSICAL, CHEMICAL, AND GEOLOGICAL
OCEANOGRAPHY OF CHESAPEAKE BAY

Special Scientific Report No. 34

VIRGINIA INSTITUTE OF MARINE SCIENCE
Gloucester Point, Virginia

1962
PREFACE

This bibliography lists published and unpublished references containing information on the physical, chemical and geological oceanography of the Chesapeake Bay. The broad scope of oceanography necessitates inclusion of related environmental material from fields of hydrology, meteorology, groundwater geology and water pollution. Selection and grouping of references within the bibliography is based on pertinence of the subject as judged by the author. Where the reference covers more than one oceanographic aspect considered, it is listed separately under the appropriate sections. A few references dealing chiefly with biological oceanography are included if they contain new or significant data bearing on physical, chemical or geological oceanography.

In preparing this bibliography it was not possible to examine all unpublished references given. These references are frequently incomplete and may not be attainable. They should be cited with utmost caution. Most of the published material is located in libraries of marine institutions on the Chesapeake Bay or in libraries of government agencies in Washington, D.C.

The author wishes to acknowledge the help of Miss Evelyn Wells, staff librarian, Virginia Institute of Marine Science for checking some of the references.
