Transatlantic Currents: Exploring the Past, Present, and Future of Global Historical Archaeology

ABSTRACT

The past, present, and future of global historical archaeology is addressed first through a comparative analysis of the development of the discipline in North America and the British Isles, and second by a consideration of the recent expansion of interest around the world and particularly in postcolonial contexts. Drawing from a range of global case studies, it is argued that the most productive way forward for the discipline lies in its ability to engage productively with contemporary societal problems and global challenges in locally rooted and contingent ways.

Introduction

As first defined, global historical archaeology was unashamedly dominated by North American concerns and voices, which occasionally resulted in the muting and eliding of disparate global experiences. Increasingly, and positively, scholars around the world and outside the North American tradition have begun to engage with and direct practices in and of historical archaeology. In considering the future of the discipline, a key question is whether there is, or whether there should be, any unity in practice, focus, and framework. Having spent my career, thus far, practicing historical archaeology on both sides of the Atlantic and seeing firsthand the divergences in practice between those regions, I have come to value diversity over unity. There is a richness to the many varieties of global practice, with an astounding variety of contexts, frameworks, questions, and interpretations. Greater attention to and respect for these variations constitutes, to me, the way forward for historical archaeology, as does the increasing emphasis upon situating historical archaeology as politically engaged and relevant. Rather than exporting some version of North American–style historical archaeology around the globe, I would prefer to see a future for the discipline in which the practices outside North America are not only taken into consideration by the historic disciplinary core, but, in fact, can begin to drive innovation and develop global synergies. The principal arena for such emergent synergies centers on politics, engagement, and social justice, particularly in postcolonial contexts.

Before addressing these current and future directions, it is useful to review and consider commonalities and divergences in transatlantic approaches to historical archaeology in the traditional centers of the field, North America and the British Isles. As such, this article inevitably draws heavily from Anglophone historical archaeology. My principal aim is to capitalize upon my own transatlantic career to reflect upon the different trajectories of research into the material legacies of the last 500 or so years, with a particular emphasis upon the development and character of Irish historical archaeology. I set out suggestions for the future in terms of broader lessons that might be learned from the regional traditions, and then, secondly, I consider key themes for the future, drawing on the expansion of historical archaeological research outside the Anglophone world. While I highlight a series of global projects as exemplars of newly emergent practice, the discussion is far from an exhaustive summary. Instead, I focus primarily upon the manner in which historical archaeology can and is engaging with societal problems and global challenges, albeit in locally rooted and contingent ways.

From my own perspective, one of the more remarkable developments of the last 15 years has been a massive increase in interest in the archaeological study of the later historical period in the United Kingdom and in Ireland. Indeed, the development of later historical archaeology in Ireland, north and south, is nothing short of miraculous. Prior to the 1998 Good Friday Agreement, which

Permission to reprint required._
ushered in an uncertain, but, nonetheless, crucial period of reflection as part of the Northern Ireland peace process, any efforts to consider the archaeology of the postmedieval period were liable to bring accusations of partisanship—focusing only on the “archaeology of the English.” Given the timing of its emergence, Irish historical archaeology is therefore exceptionally politically aware in a manner that has not always been the case in North American historical archaeology, where the archaeological study of colonial life is a long-accepted and venerable tradition. Aspects of North American historical archaeology certainly are politically engaged, most notably the influential strand of critical archaeology that focuses upon a critique of capitalism, e.g., McGuire (2008) and Leone (1999, 2005); archaeologies of the African diaspora, e.g., Ogundiran and Falola (2007); and the growing body of literature on the historical archaeology of native communities, e.g., Stillman (2009, 2014), Mrozowski et al. (2005), and Jordan (this issue). But, as I will explore further below, contemporary Irish historical archaeology has additionally benefited from its emergence at a time when public engagement and inclusive archaeologies are widely practiced, encouraged, and theorized, allowing for a new archaeological praxis aligned with peace building and central to conflict transformation.

Transatlantic Comparisons: The Development and Character of Historical Archaeology

Different theoretical influences have long framed research in historical archaeology on both sides of the Atlantic. The distinctive geography and national histories of Europe, in the estimation of British archaeologist Paul Courtney (2009b:93), has shaped the character of postmedieval archaeology: “[W]hat Pierre Bourdieu has termed habitus influences different trans-Atlantic outlooks ... the patchwork of distinctive European pays a few miles across contrasts with the vast distances of many American regions ... a Europe full of barriers ... not an ‘open‘ frontier.” National boundaries and the distinctiveness of national histories and European regional engagements foster a wide variety of distinct research questions and agendas, if at times also hampering pan-European engagement with historical archaeology. The diverse character of the European Union itself, with its 28 member states speaking 24 different official languages, exemplifies the nature of the challenge (Brooks 2013:5).

Perhaps even more significant is the importance of addressing issues of continuity from the medieval to the modern. From a New World perspective, 1492 may seem a convenient starting point for historical archaeology, coinciding as it does with what is considered a major historical rupture in the histories of many indigenous peoples and, by extension, of the Europeans who encountered them. But, how important was this date and event from a European perspective? Can we really view the medieval period as one of tradition and stasis, awaiting transformation through the mechanism of Atlantic expansion? Or, as long argued by scholars like Frans Verhaeghe (1997:28), that the medieval world equally went through numerous changes, some of them being quite fundamental such as the emergence of new urban societies, networks and cultures, and most if not all leading to greater complexity in terms of society and social stratification, economy, and social and cultural behavior. This constitutes yet another good reason to pay at least as much attention to what survived from the medieval period (and if possible why) as to what changed and why.

Consideration of the complexity and dynamism of late medieval Europe exposes the limitations of some of North American historical archaeology’s most cherished models, the most obvious of which being the Georgian worldview, which oversaw an apparent abandonment of medieval precepts and practices presumed to be in operation as late as the turn of the 18th century.

The anthropological character of North American historical archaeology is clearly one of its most distinctive strengths (Schuyler 1970, 1988), but this has inspired a tendency on the part of North Americans to believe that, by virtue of being anthropologists, they are also, de facto, more theoretically sophisticated than their European counterparts, who are more often trained in history or in
archaeology as a stand-alone discipline. It cannot be denied that since the 1966 establishment of the Society for Post-Medieval Archaeology, the discipline in the United Kingdom, in particular, gained the reputation of excellence in descriptive studies of finds, buildings, and landscapes, but lagged far behind when it came to considering the meaning and significance of archaeological data. A significant critique of this brand of postmedieval archaeology coalesced in the 1990s, encapsulated by the theoretically informed work of Matthew Johnson (1996, 1999:21), who, himself, overtly referenced the “greater intellectual strength of North American historical archaeology” alongside a collection of papers (Tarlow and West 1999) that showcased the work of a new generation of self-described later historical archaeologists. When West (1999:1) wrote that “post-medieval archaeology does not have a flourishing image as a research area ... years of data collection have not been illuminated by questions centered on people,” she was expressing the frustrations of many on both sides of the Atlantic with the traditional, data-driven approach of postmedieval archaeology.

However, this situation has now been almost completely reversed, to the extent that there is growing concern amongst professionals about the erosion of material culture knowledge, exacerbated in recent years by the untimely loss of two key finds specialists, Geoff Egan (1951–2010) and Paul Courtney (1955–2013). This reversal in emphasis is owed, in part, to the influence of North American approaches, but also to the impact of the strength of post-processual approaches to interpretation that characterize teaching in a number of UK higher-education institutions that have produced a new generation of scholars willing and able to apply theoretical frameworks to their studies. This welcome development, however, has also occurred at a time when university timetables and finances increasingly compress and limit the time and infrastructure required for the intensive field and laboratory training essential to the development of a professional archaeologist. Most students are introduced to material culture through concepts like materiality and object agency, but few are taught how to tell the difference between creamware and pearlware, or how to identify and date a transfer-print pattern and, more importantly, how that knowledge can actually contribute to data-rich, yet sophisticated, analyses of early modern production and consumption exemplified by the work of scholars like Alasdair Brooks (2009). Influenced as well by the move away from traditional material culture studies, historical archaeology in the British Isles has increasingly begun to emphasize contemporary archaeology: applying theoretical constructs to interpret the present day, and blurring the disciplinary boundaries between archaeology, cultural geography, and cultural studies (Harrison 2011, this issue; Horning 2011).

In compiling my thoughts for this article, I returned to a similar effort to reflect on the past, present, and future of historical archaeology that formed the core of an academic conference in 2008 and subsequent book (Horning and Palmer 2009). There the aim was to tap into the diversity of approaches and address critically the sense of fragmentation that seemed to characterize practice on the islands of Britain and Ireland specifically. At the time, the relatively small community of scholars focusing on the material legacies of the last 500 or so years appeared riven by factionalism—separating into discrete groupings of postmedieval archaeologists, industrial archaeologists, and contemporary archaeologists—to the overall detriment of the discipline. What emerged from those conversations was a sense that differences were in many ways illusory. In short, approaches constantly change.

The first volume of the journal Post-Medieval Archaeology in 1967 defined the chronological scope of the society as “the period of the unification of states within the British Isles, the establishment of Britain upon the path of maritime colonial expansion and the initial stages of industrial growth,” coinciding, in America, with the period “extending from the arrival of the first European settlers up to the Declaration of Independence” (Butler 1967:1). From the first, then, postmedieval archaeology in Britain employed a terminal date of ca. 1750–1780. In the same inaugural issue, Ivor Noël Hume (1967:104) described American historical archaeology as intended “to foster the study of non-aboriginal archaeology in
the western hemisphere,” and whose “sphere of interest was limited by culture rather than by time.” Few would agree now with Noël Hume’s cultural exclusionism, just as postmedieval archaeology no longer employs a cut-off date—as particularly exemplified by the rise of contemporary archaeology.

What of the current contrast between North America and the British Isles? Significant differences do exist between the ways in which historical archaeologists on either side of the Atlantic select and approach evidence. For example, buildings archaeology is a well-established branch of postmedieval archaeology, and in some places is the dominant branch (Hicks and Horning 2007). But in North America, studies of standing buildings are still generally the province of architectural historians, not archaeologists. Similarly, one might point to the varying incorporation of scientific analytical techniques in historical archaeology. The study of postmedieval faunal material is unfortunately exceptionally rare outside of North America (Thomas 2009), while use of LiDAR (Light Detection and Ranging) and large-scale survey to understand the evolution of historical landscapes (Dalglish 2009) is less common in North America, understandably a factor of the immense differences in scale.

In North America, a major thread of research (albeit much of it compliance driven) focuses on rural domestic sites, e.g., Cabak et al. (1999) and Wilson (1990). As acknowledged by Paul Courtney (2009b:97), however, the “below ground archaeology of everyday agrarian life and society” is probably the most archaeologically neglected topic in both Britain and Ireland. Legislative frameworks matter as well, often lagging far behind academic interest in particular site types. In the Republic of Ireland, for example, this lack of attention to vernacular sites is further exacerbated by narrow readings of the law. National Monuments legislation stipulates that sites predating 1700 are automatically eligible for inclusion on the Record of Monuments and Places, giving them some measure of protection, while a strong case has to be made to include later sites. The result has been that later sites have been only sporadically added, with only County Cork routinely considering 18th- and 19th-century sites to be of potential archaeological value. Other county archaeological surveys tend to stop coverage before 1700, and, in some cases, 1600. This attitude toward later historical sites can be directly attributed to the politics of nationhood, and specifically the emergence of the newly independent Republic of Ireland: “From the outset the new state was very clear about the past it believed more appropriate to commemorate, or more properly, those pasts that it chose to ignore. This selective memory was effectively enshrined in the Republic of Ireland’s National Monuments legislation, beginning with the Act of 1930, in which the period after AD1700 was officially considered not to be of archaeological interest” (Rynne 2009:168).

The ongoing contestation over the values placed upon particular heritages is underscored by the revelation in 2011 that post-1700 sites were quietly being removed from the Record of Monuments and Places (McDonald 2011). Concerns from developers were cited, as developments in the well-documented and well-surveyed County Cork, for example, might have to mitigate impacts on recorded postmedieval sites, whereas in Donegal they might not because the Archaeological Survey of Donegal only recorded sites predating 1600. The ubiquitous and appealing character of Ireland’s later historical built and material heritage, exemplified by the thousands of extant 18th- and 19th-century buildings and streetscapes, paradoxically serves as a disincentive toward their study and preservation. That any associated archaeological deposits will be replete with significant quantities of industrially produced material culture also presents a significant pragmatic challenge to a system in which the state owns all archaeological objects and, as such, has a responsibility to curate and house the assemblages derived from archaeological excavations.

**Competing Frameworks: Interpreting Historical Archaeology**

Far more important than the differences in sites investigated and even the variable legislative frameworks guiding archaeological investigation and interpretation are the
questions posed of archaeological sites, which vary considerably on either side of the Atlantic and between countries and regions in the British Isles and Europe. The importance of considering colonialism is one such issue. Without doubt, colonialism is key to historical archaeology in lands that experienced intensive settler colonialism, as in the Americas and Australasia, but recognition of both the operation of smaller-scale colonialism, as well as the impact of the colonized on the colonizer, is still not widely recognized or appreciated. Both Paul Courtney (2009a, 2009b, 2010) and Natascha Mehler (2013) have commented from a European standpoint about the place of colonialism in European historical archaeology. In considering the general British disinterest in employing colonialism as a framing device, Courtney (2009a:181) found a “collective amnesia and embarrassment about colonialism. … Anyone over 60 was probably brought up on the history and glories of the British Empire. Anyone younger has probably gone through their education without the barest mention of empire and colonialism.” In Mehler’s estimation, continental Europeans are even less likely to engage with colonialism: “[T]he subjects of colonialism or immigration as a major component of globalization have hardly been dealt with by non-British European archaeologists” (Mehler 2013:40). As an American-trained historical archaeologist working in Ireland, colonialism is a central theme of my own research (Horning 2013b), and it also features significantly in the work of other Irish historical archaeologists, e.g., Lyttleton and Rynne (2009). But considerations of colonialism within Europe—even within a place like Ireland that experienced a form of colonization—are inevitably different in content, form, and impact than are such considerations in lands where indigenous populations were clearly displaced and dispossessed.

Irish historical archaeology is not alone within Europe in addressing colonialism. There has been a recent explosion of studies throughout Scandinavia that are overtly addressing the colonial histories of nations including Denmark, Sweden, Finland, Norway, and Iceland. Central to this new concentration on exploring Scandinavian colonial histories and legacies is, as summarized by two of its key practitioners, Jonas Nordin and Magdalena Naum, a desire to challenge the prevailing view that somehow “Scandinavian participation in colonial politics was benign and their interactions with the encountered peoples in Africa, Asia and America were gentler and based on collaboration rather than extortion and subjugation” (Naum and Nordin 2013:4). The deconstruction of this dominant narrative is ongoing, via scholarship on Danish engagements in the Caribbean (Armstrong et al 2013), Africa (Weiss 2013), and in South Asia (Jørgensen 2013); Swedish colonies in the New World (De Cunzo 2013) and the impact of indigenous American culture in Sweden (Nordin 2013); and on the operation of colonialism within Scandinavia, e.g., the displacement of Finns (Ekengren 2013) and particularly the treatment of Sámi peoples by an expansive, capitalist, Swedish state (Fur 2006; Ojala 2009; Lindmark 2013).

Scholars on the Iberian Peninsula are also critically engaging with colonialism and its legacies, influenced in particular by the rich scholarship on colonialism emanating from South America, which has fostered interest in Spanish and Portuguese colonialism (Schávelzon 2000, 2013; Funari and Senatore 2015), as well as the longer history of exploration of Spanish colonialism in North America, e.g., Deagan (1987, 2003). M. Dores Cruz (2007) has written eloquently about the lasting legacy of Portuguese colonialism within Portugal through an analysis of school textbooks during the Estado Novo period (1933–1974) and critical reflections on her own Portuguese upbringing at the time of decolonization. Portuguese colonization in Africa has also been productively explored by Innocent Pikirayi (2009), while scholars within Portugal have produced a series of foundational studies of the Portuguese material culture that can be found around the world (Gomes and Casimiro 2013; Teixiera et al. 2015) and that directly impact understandings of the Portuguese colonial reach.

Capitalism, and its impacts, remains a, if not the, key concern that drives much research in North American historical archaeology and whether it is, de facto, the archaeology of capitalism, e.g., Leone (1999), Matthews (2010), and Wurst and Mrozowski.
(this issue). At its most basic level, this is undeniably true. When one looks at the archaeology of the last 500 years, anywhere on the planet capitalism has been and continues to be influential. Indeed, many of the studies I referenced above in relation to regional traditions of historical archaeology also acknowledge global interconnectedness in terms of the movement of goods. Differences and tensions arise when considering issues of scale, and the extent to which an overemphasis on capitalism as an all-pervading force can mask real regional differences and oversimplify past human experiences (Croucher and Weiss 2011). In a South American example, Brooks and Rodriguez Y (2012:85) overtly address this tension between considering Venezuelan historical archaeology from a global perspective and considering its local context. For them, that tension is the defining attribute of Venezuelan historical archaeology; “being simultaneously part of the West and its periphery, between engagement with and separation from global trade, between cosmopolitanism and local context, are a natural part of South American historical archaeology.” Similarly, Pedro Funari (1997, 1999, 2007; Funari and Ferreira, this issue) has argued against the North American focus on capitalism by stressing the continued operation of aspiration within their study population. In their estimation, this focus “ascribes to rural workers and their culture their own dynamics and agency, rather than characterizing them only through reactions to the powerful, although it was clearly an unequal situation” (Pluciennik et al. 2004:29). Arguments over the exact role of capitalism unfortunately can and do become acrimonious, and efforts to challenge and complicate monolithic constructions of capitalism through moving away from straightforward narratives of domination and resistance have attracted fierce criticism (Orser 2011:539). Regardless of the specific role played by capitalism in shaping local societies around the globe, for me a point of congruence amongst practitioners lies in a genuine concern over the continuing operation of inequality and oppression that can be linked in one way or another with the emergence of the modern world and the variable operation of the forces of capitalism, colonialism, and globalization.

The Past in the Present:
An Emerging Praxis

Turning attention to such issues of inequality and injustice, for me the most intellectually exciting avenues in later historical archaeology at present are the increasingly sophisticated ways in which scholars are attempting to address contemporary issues through the study of the past by engaging communities beyond the academic and professional worlds. Here I want to distinguish between versions of community archaeology that capitalize on volunteer labor and community funding to perform otherwise traditional archaeological projects and those much more difficult, and rare, projects that prioritize inclusivity and coproduction (Horning 2013c; Schmidt 2014b). How we move from one model to the other is not straightforward, but doing so carries the potential for precipitating genuine social change. Shifting from traditional top-down models of public archaeology into collaborative practice effectively requires philosophical reskilling. Advocacy and inclusivity necessitate a lessening of control and a conscious (not tacit) acknowledgment that one is making a choice in how to interpret and approach the past. Doing so without compromising or abandoning concomitant ethical responsibilities to the dead and the actualities of their experiences is extraordinarily difficult. Less philosophically challenging, but perhaps of greater importance to collaborators is the reality that, often, it is the process of community archaeology that matters more than the outcome.

The real risk here, and one that I have agonized over throughout my career, is that in relinquishing control and in prioritizing
the present over the past we archaeologists simply construct useable pasts: narratives that are explicitly formulated to serve a contemporary need. Balancing responsibilities to the past and to the present is a deadly serious endeavor, as useable pasts lie at the heart of nation and empire building and, in those contexts, inevitably privilege the elite and, in a capitalist world, justify inequality. Focusing intentionally on the working class, or colonized Other, is a common riposte to concerns over elite bias, but we cannot just create heroic figures in opposition to dominant narratives. Ultimately, what is our purpose? Is it illuminating past lives and analyzing the underpinning of inequality, or is it possible to use archaeology to challenge capitalist-driven inequality in the present and, at the same time, do justice to the complexity of past experiences?

An answer, if not necessarily the answer, lies in pragmatic philosophy. Here I take inspiration from the work of Stephen Mrozowski (2014:343), who advocates a pragmatic approach that specifically requires practitioners to “explicitly identify the practical outcomes of their research” and recognize that “social science needs to be politically engaged.” Of course, the aim of situating archaeology as political engagement is neither necessarily complementary with nor conducive to inclusivity in archaeological practice. Yet, I believe the two are not incompatible, and that the combination, with all of its inherent tensions and contradictions, may in fact lead to more meaningful, deeper understandings and potentially new praxis. To illustrate the potential of such an approach, I offer up ongoing efforts to actively situate archaeological practice in Northern Ireland within the ongoing peace process (Horning et al. 2015).

Contemporary Northern Ireland is a divided society. Its communities are principally drawn from two main traditions, Catholic and Protestant, who self-identify with, respectively, the Gaelic Irish and the British who came to Ireland as part of a series of colonial schemes in the 17th century. Geographical segregation is the norm, only 8% of schoolchildren are educated in an integrated environment, and, in Belfast, over 80 so-called peace walls are still deployed to physically separate communities in conflict. While the high levels of violence associated with the 30 years of the period known as the Troubles (1969–1998) have thankfully decreased, and society has become “normalized,” security alerts still continue on a daily basis, and the risk of a return to violence is ever present. The psychological impact of conflict is manifested in high levels of post-traumatic stress disorder and elevated suicide rates that have been directly attributed to the legacy of conflict (Tomlinson 2012), particularly affecting members of my generation, who grew up during the height of the conflict in the 1970s. Paradoxically, the structure of the peace process itself impedes full integration of society, as it is founded upon a principle of ensuring parity between the two communities. Parity and mutual respect were and are critical aspects of peacebuilding, but inevitably reify difference, rendering efforts to explore and encourage commonalities over difference extremely challenging, but all the more critical to building a truly peaceful society. Directly implicated in contemporary difference are the still-contested and unresolved histories of the 16th and 17th centuries, when the English Crown extended control through the mechanism of plantation, a colonial effort to supplant the Gaelic Irish population that, despite intent, did not succeed in this aim. The archaeological record of this period overtly complicates the accepted dichotomous narratives through highlighting complexity and, particularly, extensive evidence for shared practice and the reliance of plantation settlements upon the demographically dominant Irish population (Horning 2001, 2013b; Donnelly 2005; Breen 2012).

Over the last decade, archaeological projects focusing on the late 16th and early 17th century have consciously begun incorporating community groups and schools in excavations, with an emphasis upon the field experience and the potential for shared discovery. Such immersive practice gives individuals the opportunity to physically engage with the process of discovery and, importantly, the space to individually decide what the evidence actually means. Indicative of the positive impact of these efforts are comments from one of the community groups involved, the Ballintoy and District Local Archaeological and Historical Society (2013):
The knowledge we gained of the complicated nature of the Plantation period challenged our previously held views. Members... from different backgrounds are now more willing to discuss the impact of the Plantation... willing to reconsider their own identities in light of what they have learnt through engaging with professional archaeologists.

From these comments, and others, it is clear that the physical engagement with the discovery process allows individuals to make up their own minds, in their own time, about a process to be controlled by heritage professionals, but it is one that archaeologists can set into motion.

To date, we archaeologists have focused our efforts on those groups who traditionally would be open to explorations of the past—local history groups and schools (Horning 2013a, 2013c; Horning et al. 2015). The success of these efforts, measured through testimonials, such as that cited above, has led us to develop a more challenging series of projects in conjunction with the Corrymeela Community, a shared-governance civil society formed in 1965 with the aim of bringing people from across the sectarian divide together in safe and neutral surroundings. The steering group for the project, made up of trained Corrymeela facilitators, archaeologists, and museum professionals, is generally in agreement on the importance of engaging groups that are more difficult to reach (including both ex-paramilitaries and survivors of Troubles-related violence) with the tangibility of plantation period archaeology in an effort to impact upon the present and future. However, agreement on precisely how to do this, and, indeed, what the evidence might actually have to contribute to peace building, is less straightforward, but has led to some very productive discussions.

Most important has been the evolution of the program itself. Together group members have drafted and signed on to a code of practice that participants agree to at the start of any program. In addition to being up front about the program’s aim to connect an exploration of the past with peace building in the present, the contract is based upon a series of principles that, in summary, prioritize respect for people both in the present and the past. A key outcome from the Corrymeela perspective lies in just bringing people together and creating a space in which participants can feel free to express themselves and listen to others with respect. For my part, I simply hope for individuals to develop awareness that people in the past—the Irish and English and Scots, who, for better or worse, were compelled to engage with one another—had no foreknowledge of the present. The Troubles may seem an inevitable outcome of the Ulster Plantation from the perspective of the 21st century, but “doing history backwards” is a reminder that, from the vantage point of 1609 or 1611 or 1630, the events of the late 20th century were far from inevitable. Of far greater concern to the majority, of whatever identity, was negotiating the needs and realities of the day, from the quotidian to the creative.

As I have argued elsewhere (Horning 2006, 2014), the ambiguous character of Ireland’s colonial experience, and the way that Northern Ireland’s even division between communities that see themselves as the marginalized Other—challenges blanket assumptions about Ireland’s current post-coloniality and provides a space within which to complicate overly prescriptive understandings of colonial entanglements. As archaeologists begin to engage with Ireland’s later historical archaeology more willingly, whether as part of the inclusive practice outlined above or simply beginning to acknowledge that the material remains of the last 500 years have heritage value, there is potential to both inform and engage with the archaeologies of other nations and places grappling with colonial legacies and postcolonial formulations, as considered below.

Exploring Global Practice

Historical archaeology is increasingly taking root around the world, but invariably these efforts are entwined with contemporary political issues and power struggles. Very real differences in culture, regional histories, and especially engagements with the West all combine to ensure distinctive practices and trajectories. Calls for an overarching global historical archaeology to replace narrow, local
studies falter in the face of this diversity, underscoring one of Frederick Cooper’s criticisms of globalization as an analytic category: “That global should be contrasted to local, even if the point is to analyze their mutual constitution, only underscores the inadequacy of current analytical tools to analyze anything in between” (Cooper 2005:93). Rather than the emergence of globalized historical archaeology, what is seen instead is a range of practices and influences very much contingent upon the local context of their emergence, but with the potential, often demonstrated, to be translated and transformed in other locales. For example, over the last two decades, the practices and concerns of historical archaeology in Australia and in South Africa have been particularly influential on the discipline at large. The emergence and strength of indigenous rights and the leadership role taken by Aboriginal archaeologists and communities has influenced the struggle for indigenous rights and control over heritage elsewhere, e.g., Fredriksen (2002), while the explicitly critical archaeologies emerging from South Africa—especially Schrire (1996) and Hall (2000)—have endeavored to re-center violence in considerations of colonialism in places like North America, where the strength of the dominant nationalist narrative obscures the reality of the same kinds of conflict and inequality seemingly so much more apparent in post-apartheid South Africa.

Important lessons are being drawn from historical archaeology elsewhere on the African continent, taking place within a wide range of contemporary cultural settings and addressing diverse histories. Efforts to decolonize African archaeology increasingly and productively explore African constructions of history and identity that often sit at odds with Western understandings of African histories and cultures (Dème and Guéye 2007; Ogundiran 2007; Lane 2011, 2014; Schmidt 2014a, 2014b; Jopela and Fredriksen 2015). Present-day inequality and conflict also significantly influence archaeological practices, as acknowledged by Peter Schmidt (2010:270), given the “deep-seated tension between our practice as scientific archaeologists and our behavior as sentient humans with friends and collaborators who are daily suffering from the depredations of disease or poor water or authoritarian rule—whatever the affliction.” Pragmatism, as addressed above, becomes particularly important in such circumstances and has led to the productive coupling of heritage practice with economic sustainability; e.g., Breen (2014) and Breen and Rhodes (2010).

Within Europe, archaeological attention is increasingly being paid to 20th-century conflicts. Innumerable archaeological investigations have been launched examining the battlefields and landscape associated with World War I in tandem with its centenary. The Spanish Civil War (1936–1939) has commanded intensive investigations and no shortage of tension, given the highly politicized character of that conflict and the subsequent legacies of the Franco regime (Gonzalez-Ruibal 2007). Similarly, and even more challenging, have been the efforts of historical archaeologists to address the material legacies of Nazism, and, in particular, the archaeology of concentration camps (Theune 2013, 2015). In Northern Ireland, archaeologists are currently struggling with how best to commemorate the anniversaries, not just of World War I, but of the 1916 Easter Rising, which ultimately led to partition of the island. Until very recently, understandings of Irish engagement in the Great War were grounded in sectarianism. The massive casualties experienced by Ulster regiments at the Somme, which still impact family and community memories, gave support to a narrative that only northern Protestants volunteered as soldiers. Such a narrative allowed for the convenient forgetting of a more complicated history in which Catholics from north and south also participated, notwithstanding armed internal rebellion against British rule. In the post-Troubles period, it has become increasingly possible, if not straightforward, to also begin to look at the material legacies of the Troubles, as productively explored by Laura McAtackney (2014), and to combine these explorations with efforts at conflict transformation, as discussed earlier in this article.

Moving back away from Ireland and from Europe, in the discussion that follows, I want to reflect briefly on a selection of other locales where historical archaeology is developing
in ways that hold the potential to shift significantly the direction of the discipline as a whole. Clearly, research questions inevitably vary according to geographic locale, while, at the same time, the manner of knowledge making and dissemination is also heavily dependent upon cultural practice and values, one example being the centrality of mentoring in academic writing, as presented by Devendra and Muthucumurama (2013) in their overview of maritime archaeology in Sri Lanka. Elsewhere in the Indian subcontinent, the shadow of empire continues to hang over efforts to pursue historical archaeology. Historical archaeology, to put it simply, is not an easy sell because it is de facto understood as the archaeology of empire and the archaeology of oppression. Particularly telling is the fact that, in a volume entitled *Historical Archaeology of India* (Dhavalikar 1999) that describes itself as the only study “which covers all the aspects of historical archaeology from ca. 1000BC to 1800AD,” the term “British” does not appear in the index and in the text only in the context of the formation of the archaeological survey of India, while the East India Company warrants only a single mention. Europe is referenced only in relation to the widespread climate downturn (the so-called Little Ice Age) and its probable impacts in India (Dhavalikar 1999:119).

The lack of interest in and consideration of the archaeology of the period of British imperial domination of India comes as no real surprise, given India’s postcolonial status and the centrality of nationalism. That the discipline of archaeology was “institutionalized in India by the colonial British rulers” (Selvakumar 2010:469) further complicates efforts to approach the colonial period archaeology within the present-day political and institutional structures. Those structures do include government support for archaeology via the venerable Archaeological Survey of India (ASI), established under British rule in 1861, but recast after independence as “simultaneously both a post-colonial bureaucratic institution and an organization that produces archaeological knowledge” (Chadha 2010:231). The ASI faces an uphill battle, not just to deflect the legacy of its own origins, but crucially also in not being seen merely as producing the archaeological knowledge sought by India’s political elite. The reputation of the ASI was clearly tarnished by its integral role in the Ayodhya controversy.

At present, the rapid urbanization and development currently underway in India pose an immense threat, in particular, to the built fabric and belowground archaeology of the last 500 years. There are encouraging signs, however. Government funding has been made available to explore and support capacity building and sustainability, focusing on urban heritage. Indian heritage legislation (unlike that of the Republic of Ireland) provides for any site or monument older than 100 years to be considered archaeological. Wider recognition of the heritage value of later historical sites remains dependent upon acceptance of the notion that the material legacies of the British Empire are relevant to the contemporary Indian population, insofar as it is their own ancestors whose lives were lived and meaningfully constructed within the constraints and inequities of that empire. One interesting (albeit very pragmatic) exception to this general disinterest in colonial material heritage lies in the preservation and presentation of the built heritage of Tranquebar in south India, a Danish trading port from 1620 to 1845. As explored by Helle Jørgensen (2013), the dominant narrative of Scandinavian colonialism being somehow “kinder and gentler” underpins touristic presentations of Tranquebar, geared predominantly toward Western (often Danish) visitors. Those visitors provide a considerable economic boost to the region.

Far more complicated even than pursuing later historical archaeology in India are efforts to address the legacies of colonialism in East Asia, where, as discussed by Koji Mizoguchi (2006; 2010), Japanese archaeologists, in particular, have to deal not only with the legacies of Western colonialism in the region, but also the role of Japan as a colonizing force in the late 19th and early 20th centuries. Paradoxically, as he argues, scholarly reliance on Marxist theoretical frameworks in interpreting the archaeology of earlier periods “allowed Japanese people and Japanese archaeologists to insulate themselves and to forget their
(or Japan’s) colonial activities in Korea and China.” At present, the forces of globalization and a movement away from reliance on Marxist models has created a situation where “Japanese archaeologists are struggling to recognize, self-examine, and amend colonial legacies and to find ways to confront reemergent nationalistic sentiments” (Mizoguchi 2010:89). Greater awareness of Japan’s ambiguous relationship with colonialism, as both a colonizing force and non-Western “Other,” has the potential to significantly advance discourse over historical archaeologies of colonialism elsewhere in the world.

Similarly, the archaeology of the Ottoman Empire serves as another critical check on narrow understandings of colonialism (Baram and Carroll 2000; Carroll 2010) framed by the influence of Western orientalism (Said 1978). Notwithstanding the challenges posed by present-day regional sociopolitics, interest in the contemporary archaeology of some parts of the Middle East is beginning to intersect with social critiques. For example, a collaborative Iranian-British project (Young and Fazzeli 2013) has recently employed archaeological and ethnographic research into landlord villages (enclosed settlements that were abandoned during the White Revolution of the 1970s) to address issues of gender and class. Such critical attention to inequality in the recent past carries a more-than-implicit critique of the present.

Even more immediate (and risky) in its implications is the thoughtful analysis by Iranian archaeologists Maryam Dezhamkhooy and Leila Papoli Yazdi (2010) of the ruins of the houses destroyed in the 2003 Bam earthquake and the personal narratives of their inhabitants. Building on this research, Yazdi (2010:44) also considered the material evidence for household behavior in light of the extreme divide between the public and the private self in Iran. She notes that

Iranians carefully conceal aspects of their lives that must be hidden as they are contrary to both tradition and the law. The public appearance of these aspects of life can have dangerous results. ... These practices of concealment result in paradoxical behavioral patterns between how people act inside their homes and how they act outside their homes. As with most aspects of human behavior, these patterns leave signs and markers in material culture.

This research has much in common with historical archaeology as it has developed in North America: a focus on the household and on illuminating the lives of people who are poorly documented. But, no matter how empirically grounded in the very materiality of the household archaeologies of pre-earthquake Bam, the decision by Yazdi and Dezhamkhooy to undertake such a study must be understood as a political action. In this example, contemporary historical archaeology poses an explicit threat to the sociopolitical order of contemporary Iran by undermining assumptions about compliance with legislated behavior.

**Conclusion**

Historical archaeology is now practiced, in some form, in much of the world today. But, what will it look like in the decades to come? What I hope is that the discipline will continue to embed itself in a range of forms around the globe to intersect with social critiques. For example, a collaborative Iranian-British project (Young and Fazzeli 2013) has recently employed archaeological and ethnographic research into landlord villages (enclosed settlements that were abandoned during the White Revolution of the 1970s) to address issues of gender and class. Such critical attention to inequality in the recent past carries a more-than-implicit critique of the present. Even more immediate (and risky) in its implications is the thoughtful analysis by Iranian archaeologists Maryam Dezhamkhooy and Leila Papoli Yazdi (2010) of the ruins of the houses destroyed in the 2003 Bam earthquake and the personal narratives of their inhabitants. Building on this research, Yazdi (2010:44) also considered the material evidence for household behavior in light of the extreme divide between the public and the private self in Iran. She notes that

Iranians carefully conceal aspects of their lives that must be hidden as they are contrary to both tradition and the law. The public appearance of these aspects of life can have dangerous results. ... These practices of concealment result in paradoxical behavioral patterns between how people act inside their homes and how they act outside their homes. As with most aspects of human behavior, these patterns leave signs and markers in material culture.
Acknowledgments

I wish to thank Chris Matthews for the invitation to contribute to this special issue, and especially for his patience and editorial guidance. Nick Brannon, Colin Breen, Alasdair Brooks, Stephen Mrozowski, and Ruth Young contributed measurably to my understanding of the issues raised in this paper through graciously sharing their knowledge, insights, and research materials. I am grateful to Chris Matthews, Matthew Johnson, Lynette Russell, and Alfredo González-Ruibal for their helpful comments on the original version of this article. Finally, I wish to acknowledge a considerable debt to my late colleague Paul Courtney, whose understanding of European historical archaeology was as unrivalled as was his generosity in sharing that knowledge.
