2023

The Virginia Game Fish Tagging Program (VGFTP) began in 1995 with funding from Virginia Saltwater Recreational Fishing Development Fund (fishing license funds) and matching funds from VIMS.

The idea for the program stemmed from the 1980's when Mr. Claude Bain, III, former director of the Virginia Saltwater Fishing Tournament (VSFT) under the Virginia Marine Resources Commission (VMRC) approached Mr. Jon Lucy at the Virginia Institute of Marine Science (VIMS) about developing a tagging project on red drum. Bain and Lucy realized not only were critical habitat and seasonal movement data limited for red drum in state waters, a similar situation existed for a number of other marine recreational species like black drum, cobia, speckled trout, and tautog. As a result, they decided to explore developing a multi-species, angler-assisted tagging program.

The program has changed and expanded over the years, and at the VMRC, Lewis Gillingham is the current VMRC Virginia Saltwater Fishing Tournament (VSFT) Director and manages the VMRC portion of the tagging program. Ann Burnett, also of the VSFT, deserves special recognition for dedication to the program, as she has more experience than any other staff member with the project (having been there from the start!). Her consistent work, data management and knowledge keep the program on track. Also from the VMRC, Todd Sperling, takes the VGFTP to new levels with evolving web-based platforms and query options for the VGFTP database program database.

Susanna Musick, in the Marine Advisory Program at the Virginia Institute of Marine Science, is the Principal Investigator for the tagging program and coordinates VGFTP training, data analysis and preparation, outreach, and reporting. Also at VIMS, Dave Ferree provides support for the tagging program by assisting with workshop preparation, data entry for our most prolific taggers, and coordinating tag purchases. Cheryl Teagle helps to manage the tagging program budget. VIMS Publications provides critical assistance in the preparation of posters and annual reports. The VGFTP is a team effort by many critical players, especially the anglers who devote significant time and effort to tagging target fish and reporting fish recaptures.

VIRGINIA GAME FISH TAGGING PROGRAM 2023

Introduction

Through 2023, the Virginia Game Fish Tagging Program (VGFTP) has maintained a 28-year database of records for tagged and recaptured fish. The program is a cooperative project of the Virginia Saltwater Fishing Tournament (VSFT) under the Virginia Marine Resources Commission (VMRC) and the Virginia Institute of Marine Science (VIMS) of William & Mary (under the VIMS Marine Advisory Program).

The main goal of the program is to train and maintain an experienced group of anglers who volunteer their time to properly tag and release fishes. Data on tagged and recaptured fish are summarized in annual reports and are accessible on VIMS website: <http://www.vims.edu/vgftp/>. Time series data are organized and provided when requested by anglers, angling groups, researchers, and fishery managers.

Program participants are trained to tag only designated target species in Virginia waters. Participation in the program is capped at two hundred trained taggers. Supporting this number of taggers has been manageable when meeting tag and tagging equipment needs, performing timely data entry, and mailing of tag-recapture reports (and reward items) to anglers reporting catches of tagged fish.

Funding for the program is applied for annually through a competitive proposal process under the VMRC Recreational Fishing Advisory Board. The program funding requires the Board's positive recommendation, which then goes before the VMRC Commissioners for final approval. If funding is approved, Virginia Saltwater Recreational Fishing License Funds (administered by VMRC) primarily cover budget needs, with additional matching funds contributed by VIMS. VIMS provides approximately 50% of matching funds for each proposal and both the VMRC and VIMS provide the majority of annual salary support for program staff each year. In short, the VGFTP provides excellent value.

A cooperative but separate funding proposal from that of the VSFT office is submitted annually to the VMRC by VIMS. The VIMS portion of the program focuses primarily on data analysis, coordination of training and awards, purchasing all tags and tagging equipment (tag guns, tag sticks, tagging needles, and constructing measuring boards). Also included in the VIMS budget are costs for travel presenting program results at fishing clubs and scientific meetings. VIMS also handles several printed materials including tagging training handouts, waterproof tagging data sheets, and laminated posters alerting anglers to target species and the telephone number for reporting recaptured fish. The design, printing and publication of annual reports also falls to VIMS, including data analysis and the publication and maintenance of digital reports on the VIMS website and the updates for the VGFTP Facebook page (www.facebook.com/vagamefishtagging/).

The VSFT office also submits a separate proposed budget. This budget predominantly covers expenses associated with purchasing reward items for recaptures and mailing such items (with printed Fish Recapture Reports) to people phoning in tagged fish recapture information. Anglers who report tagged fish choose among various reward options including custom T-shirts, caps, sun visors, pewter fish pins, or plastic tackle organizers (as long as such items remain in stock).

Recapture awards encourage diverse members of the public (including commercial fishermen, seafood dealers, etc.) to call in reports of tagged fish they encounter. The reward system and recapture reports provide positive feedback to anglers and encourage them to continue to participate in the program and report future recaptures of tagged fish. Direct association of VGFTP taggers with others in the angling community enhances program awareness, reminds anglers (and commercial fishers) of the importance of reporting

tagged fish, and provides the angling community with positive fishery conservation role models. The program succeeds because of good teamwork across the angling community.

The tagging program documents annual and year-to-year movement and habitat utilization patterns of selected finfish species in Virginia waters. For certain species, the program documents significant coastal migrations. Many of these species spawn in the lower Bay or nearshore waters of Virginia and use Virginia estuarine and coastal waters as nursery and feeding grounds.

The program's results are valuable for the angling community and to fishery researchers and managers. The number and size distribution of fishes tagged each year compliment other research-based data sets and can help fishery managers gain a more comprehensive picture of sizes of fish released in the state's marine recreational fishery.

Tagging effort for flounder, red and black drum, speckled trout, cobia, spadefish, triggerfish and sheepshead primarily occurs in the Bay and nearshore coastal waters. However, tagging of tautog, black sea bass, spadefish and gray triggerfish occurs over much broader areas of the Bay and inshore-offshore waters. Tagging for structure-oriented species occurs on sites such as fishing piers, artificial reefs, the Chesapeake Bay Bridge Tunnel complex, shipwrecks and other bottom sites occurring from the lower Bay to sites offshore of Virginia.

In the past, tagging data from the Yorktown Power Station (York River) and the Center for Energy Conservation Power Station (Elizabeth River) helped to document these important over-wintering sites for various species, especially speckled trout and red drum. Historical tagging effort at these warm water discharge sites through cooperation with Virginia Dominion Energy largely came to an end in 2014 due to the lessened utilization of those facilities, and that continues to be reflected in VGFTP data.

Target species

Target species for 2023 appear below. Summer flounder replaced gray trout (weakfish) in 2000, the latest change to date.

Black Drum	<i>Pogonias cromis</i>
Black Sea Bass	<i>Centropristis striata</i>
Cobia	<i>Rachycentron canadum</i>
Summer Flounder	<i>Paralichthys dentatus</i>
Red Drum	<i>Sciaenops ocellatus</i>
Sheepshead	<i>Archosargus probatocephalus</i>
Spadefish	<i>Chaetodipterus faber</i>
Speckled Trout	<i>Cynoscion nebulosus</i>
Tautog	<i>Tautoga onitis</i>
(Gray) Triggerfish	<i>Balistes capriscus</i>

Program Objectives

Basic objectives guide program activities. There are five main objectives:

(1) Develop and maintain a quality tagging program using a corps of trained angler taggers; tagging effort of these anglers should be directed to target species, especially where one can take advantage of significant numbers of non-legal fishes which anglers are readily discarding alive while complying with recrea-

tional fishing regulations.

(2) Where and when appropriate, direct program tagging effort toward opportunistic occurrences of strong year classes of fishes in Virginia's Bay and nearshore-offshore waters, especially species not traditionally subject to scientific tagging studies in such waters, i.e., red drum, black drum, speckled trout, tautog, sheepshead, spadefish, etc. The program does not target species already monitored and/or targeted in state waters by research-based tagging studies coordinated by fishery research agencies and institutions, in particular, striped bass.

(3) Maintain a database of tagged and recaptured fish records of use to fishery researchers and managers and the angling community. Make summaries and reports of such data available to the angling community through annual reports, websites, presentations to angling clubs, kids fishing clinics, etc. and provide requested data to researchers and fishery managers.

(4) Use the tagging program to enhance education of marine anglers about the importance of reporting tagged fishes to appropriate organizations, agencies, and research institutions to enhance understanding and management of key fishery stocks important to Virginia's marine recreational fisheries.

(5) Use program results to educate the angling community about fishery conservation and management benefits directly connected with proper handling and releasing of non-legal fishes. Tag-recapture data prove that using proper catch and release fishing practices results in better angling catches both short-term and long-term.

The program maintains a group of experienced, trained, angler-taggers who can capitalize on opportunities to tag key species that often exhibit high abundance levels during a given fishing season. These events contribute to supporting specific fisheries in Virginia's valuable recreational fishery and take on even greater value when this program documents sizes and abundance of recreationally-targeted fish and the habitats they utilize.

Database Management

As in previous years, Todd Sperling's (VMRC) skills are essential for managing the program's data files. Since 2009, data are quarantined whenever a recaptured fish species does not match that of the tagged fish (such records are linked by their specific fish tag number). This feature allows the review of such data inconsistencies, which may be the result of various issues, i.e., recaptured fish tag numbers being misread and thereby reported incorrectly, a recapture angler's mistake regarding the species of tagged fish they caught, etc. Such reporting irregularities seem to occur most frequently at fishing piers and other heavily fished shoreline locations.

Other cases may include "negative days at large" for recaptured fish, i.e., when a tagged fish's reported recapture date is earlier than the reported tagged date. Also, if a recaptured fish's size is significantly different from what would be expected, this may suggest either the person reporting the recapture badly estimated the fish's length, or the recaptured fish's tag number was reported incorrectly, etc.; such issues can then be investigated and hopefully clarified. These recapture data issues more often occur on reports called into the office and left on voice mail outside of regular office hours.

Details of Program Responsibilities

In addition to handling the majority of (non-tagger) recapture data entry, the VSFT office distributes tags, needles, etc. These items are regularly mailed to taggers and records are maintained regarding tag-number series assigned to the participants. This information is important for tracking down late tagged fish data reports for reported recaptures. Similarly, "Fish Recapture Reports" generated from the database are mailed to both the tagger and the angler reporting the recapture (along with the available reward item). This timely feedback loop is critical to the success of the tagging program.

Every tag clearly states that a "REWARD" is offered for reporting recaptures of tagged fishes. Appropriate reward items (program caps, sun visors, t-shirts, fish pins, etc.) are mailed to anglers (and commercial fishers and fish dealers reporting tags) by the VSFT office along with fish Recapture Reports. The most popular reward item is the t-shirt, which must be printed in limited numbers each year to stay within budget. Typically, late in the fishing year the t-shirt supply becomes exhausted. Then other reward items are substituted for it.

Data for both tagged and recaptured fishes are entered into the database maintained on a server at the VMRC. The VMRC database manager is proactive in contributing to the improvement of tagged and recaptured fish data and outputs. Current options include setting up various reports that provide "single-click" data summaries for review and tracking program results.

VIMS continues to serve as a remote site for entering tagged and recaptured fishes data for selected program participants. To relieve some of the workload from the VSFT office, VIMS staff enter all data for the program's most productive tagger, Mr. Ed Shepherd. From 2007-2023, Mr. Shepherd has tagged 2,000-10,000 fish annually, which resulted in 550-1000+ recapture reports each year. At VIMS, tagged fish and recapture data records are also checked for possible inconsistencies and errors; the corrected data are then analyzed and formatted for various presentations and reports. Figures demonstrating fish movement and habitat use patterns are also developed for a variety of educational programs (VIMS Marine Science Day, fishing clubs, and public presentations). Data and graphics are also developed in different formats for various program dissemination needs, i.e. VIMS website pages, annual tagging training workshops, posters, annual reports and presentations (angling clubs, civic groups and scientific meetings). Tag and program equipment orders are handled by VIMS.

VIMS also conducts tag retention field trials to evaluate whether changes might be warranted regarding the type of tag used for a specific species. Depending on the size range of fish, certain tags are more appropriate for small fish specimens (like the 2.5 in T-bar tag) versus large fish (plastic and stainless steel dart tags). For target species larger than 26-28 inches total length, the program recommends using a 6.25 in. stainless steel dart tag with wire core sheath.

Since 2008, select taggers have been testing dogleg dart tags (DD tags) and wide-anchor dart tags (DW tags) for improved retention in speckled trout and red drum. Tag retention studies continued in 2023 for these plastic dart tags to examine patterns of times at large (versus T-bar tags). Results suggest improved recapture rates with DW tags for speckled trout, the program's top-tagged species. Given the historical low recapture rate of speckled trout, and the impacts to the overall programmatic recapture rate, the expanded use of DW tags in speckled trout is encouraged.

2023 ACCOMPLISHMENTS

Tagging Effort and Recaptured Fish Results

Through 2023, the program's database included 418,135 tag records and approximately 40,653 recapture records (Table 2). *Note: VGFTP data referenced here include summaries of fish tagged and recaptured in terms of the number of *fish* recaptured (Table 1) and the *cumulative* number of *recaptures*, including multiple recaptures of the same fish (Table 2).

During 2023, 116 volunteers tagged fish, a 6.9% increase from 2022. In March, the "Top Tagger" awards were presented in Hampton as part of the Bass Pro Shops' Spring Fishing Classic seminar series. Individual top tagger achievements were celebrated, and, as in previous years, the 2023 top taggers were responsible for the majority of tagged and recaptured fish data. The VGFTP competition for the annual awards inspires taggers to work at becoming more consistent in their tagging. By doing so, they have a chance at making the list of annual award winners for any given year.

Sixty volunteers tagged 25 or more fish during 2023; this accounted for about 96 percent of all fishes tagged in the year. Similarly, the majority (89.5%) of recaptures reported during the year were accounted for by the top 39 taggers. This participation level is similar to 2022. As expected, anglers tagging the most fish often have the highest number of recaptures per year. Higher numbers of recaptures are associated with a number of variables including fishing (and tagging) frequently, organizing one's tags and data sheets to enhance tagging efficiency, and tagging at locations which hold individual fish for significant periods and which are fished frequently by other anglers. These anglers' consistent efforts produce the majority of data on local and regional habitat use and movement patterns of target species.

The range of fishing/tagging areas covered by VGFTP volunteers is important to keeping the program data relevant to target species dynamics including year-to-year abundance, habitat use and seasonal migration patterns. However, also important are a smaller number of taggers who routinely challenge themselves to even higher tagging goals (200-900+ fish per year). The teamwork and cumulative data resulting from taggers at each tagging effort level keep the program responsive to changes in Virginia's recreational fishery. Multiple recaptures of individual fish often occur at fishing piers or other sites that hold fish for extended periods (this is often the case with black sea bass, flounder, etc.). Multiple recaptures of black sea bass at fishing piers demonstrate that careful handling of undersized fish results in reasonable survival rates of the fish. Another positive result of successful releases is such fish often contribute in the future to another good day of fishing. However, especially at fishing piers, the practice also contributes to the referenced problem of some inaccurate reporting of tagged fish recaptures. Further, demand for recapture rewards at these sites can be challenging during certain periods of time and provide pressure in terms of maintaining stock and ensuring that the reported data are accurate. Sometimes, anglers requesting multiple rewards are given a limited option of rewards in fairness to all program participants and to ensure consistent reward stock.

Tables

Table 1. VGFTP Tagged and Recaptured Fish by Species and Year (2008-2023)

Year	Black Drum		Black Sea Bass		Cobia		Flounder		Red Drum		Sheepshead		Spadefish		Speckled Trout		Tautog		Triggerfish		Total

This report accounts for double tagging and counts the number of fish that were tagged and not the number of fish that were tagged and not the number of tags. Double tag info is valid for 2008 and after. For recaptures, this report counts the number of fish recaptured and does **not** count multiple recaptures of the same fish. The first column under each species is the number of recaptured fish and the second column is the number of tagged fish.

*This table also includes 190 cobia and 199 spadefish that were tagged as part of a special cooperative study with the Virginia Tech Virginia Seafood Agriculture Research and Extension Center in 2012.

Table 2. VGFTP Total Number of Tags and Overall Recapture Rates (1995-2023).

For recaptures, this table counts the total number of recaptures of the same fish. The first column under each species is the number of recaptured fish and the second column is the number of tags. These counts have been quality-controlled and any quarantined records have been removed from the final tag and recapture counts. *This table also includes 190 cobia and 199 spadefish that were tagged as part of a special cooperative study with the Virginia Tech Virginia Seafood Agriculture Research and Extension Center in 2012.

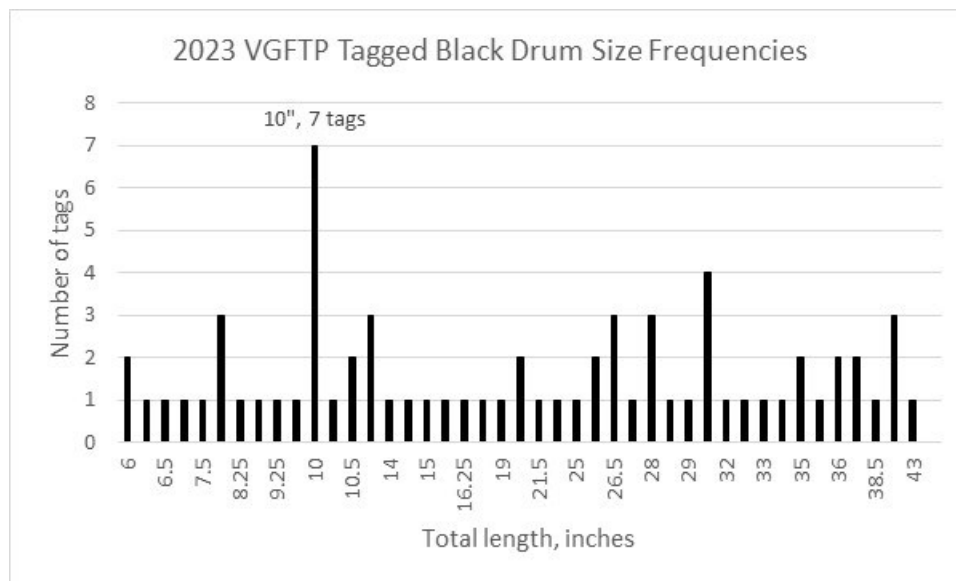

2023 Species Results

Black Drum:

In 2023, 69 black drum were tagged, of which 56.5% were adult fish (>16 inches TL). The recapture rate in 2023 was approximately 8.7% (n=6).

From 1995-2023, 5,678 black drum tags and 349 recaptures were reported (TbIs. 1, 2, pp. 13, 14), for an overall recapture rate of 6.1%. The most popular tagging site in 2023 was Rudee Inlet (n=11); this site made up 15.9% of black drum tags (Tbl. 3). This differs from 1995-2020, where the peak tagging site was Inner Middle Ground Shoal (13% of effort). In 2023, black drum recaptures were distributed evenly among the following sites: Buxton, NC surf; Mobjack Bay Reef; Monitor Merrimac Bridge Tunnel; Outer Banks Pier-Nags Head NC; Surf City-Topsail Island, NC; Tangier Sound/Island (n=1 recapture/each). Owl’s Creek was the top recapture site historically (24.3% of recaptures, 1995-2020). Tagged black drum ranged from 6-43 inches TL with peak tagging effort at 10 inches TL, n=7 tags/size, Fig. 1. (For the purpose of this report, tagging effort is defined as the number of tags used in a given area (Virginia) in a set amount of time (2023) unless defined differently). Days at large for black drum ranged from 6 to 463 days for recaptures. One recaptured fish was originally tagged in 2021; 5 were recaptured in 2023.

Tangier Sound/Island	1

Black Sea Bass:

In 2023, 1,743 black sea bass tags were reported. To better manage program resources, a minimum tagging size limit of 6.5 inches was implemented in 2010. Even with this size limit in place, black sea bass continued to have a high species recapture rate in 2023 at 18.3% (n=320 recaptures, Tbl. 2).

Long-term results (1997-2023) show more than 50,143 black sea bass tags and 12,205 recapture records (overall recapture rate = 24.3%, Tbls. 1, 2). The top tagging site in 2023 was Fort Monroe Area/Pier which accounted for 20.6% of the tagged black sea bass (Tbl. 5). Fort Monroe was also at the top of the list for tagging of black sea bass from 1997-2020. For recaptures, the top location was the Gloucester Point Fishing Pier (n=78 recaptures, 24.4%, Tbl. 6). Fort Monroe has been the top recapture site historically (1997-2020). Black sea bass are protogynous hermaphrodites: females mature around 7 inches TL and (a proportion of a group or lek) can transition into males, which mature around 9 inches TL; 54.3% of tagged black sea bass in 2023 were >7 inches TL. Tagged black sea bass ranged in size from 5.75-23 inches TL, with 6.5 inch fish at the peak (n=636, Fig. 2). These results are similar to the overall program pattern seen from 1997-2020, when peak effort occurred at 6.5 inches TL (n=14,280 tags). Recapture data for days at large ranged from 0 to 1,602 days and included fish that were tagged in 2019 (n=1), 2021 (n=8), 2022 (n=14) and 2023 (n=297). (Note: recapture data in this report include multiple recaptures of the same fish and data for days at large include recaptures of fish tagged in previous years).

Cobia:

In 2023, 323 cobia tags were reported, of which 95.4% were adult fish (>24 inches TL). The 2023 recapture rate for cobia was 27.6%. The total number of cobia tags from 1995-2023 was 7,546, with 1,207 recaptures and an 16% recapture rate (Tbl. 2). The most popular tagging location in 2023 was the York River Channel Entrance Buoys, (65 tags, 20.1% of tagged cobia, Tbl. 7). From 1995-2020, the top tagging site was the Baltimore Channel Buoy Line (12% of historical effort). In 2023, recaptures were highest at the Chesapeake Bay Bridge Tunnel (CBBT) with 10 recaptures (Tbl. 8). Tagged cobia ranged in size from 9.5-58 inches TL, and the tagging peaked at 32, 37, and 40 inches TL in 2023 (n=18 tags/each size, Fig. 3). This range encompasses tagging size frequencies from 1995-2020, where peak effort occurred at 36 inches TL (n=355). Cobia recapture data for days at large ranged from 2 to 2,548 days and included fish that were tagged in 2016 (n=1), 2017 (n=4), 2018 (n=4), 2019 (n=10), 2020 (n=8), 2021 (n=13), 2022 (n=28) and 2023 (n=17).

Flounder:

In 2023, approximately 1,590 flounder tags and 214 recaptures were reported (Tbl. 2). From 2000-2023, 91,722 tags and 10,276 recaptures have been reported for flounder (Tbl. 2), with an overall recapture rate of 11.2%. In 2023, the top tagging and recapture site was Rudee Inlet (49.3% of tagged flounder, Tbl. 9; 56.4% of recaptures, Tbl.10). Historically, the Gloucester Point Fishing Pier was the top tagging (14.4% of effort) and recapture location (n=1,613 recaptures) for summer flounder from 2000-2020. In 2023, tagged flounder varied in size from 7-21 inches TL, with the peak size for tagging at 12 inches TL (n=356, Fig. 4). This peak is a reflection of the 12 inch minimum tagging size guidelines put in place in 2010. The majority (99.2%) of flounder tagged in 2022 were adults (>11" TL). Days at large for flounder recaptures ranged from 0 to 752 days including fish tagged in 2021 (n=1), 2022 (n=5), and 2023, with the most recaptures from fish tagged in 2023 (n=208).

Red drum:

In 2023, 3,027 red drum tags were reported and there were 214 recaptures (Tbl. 2). From 1995-2023, more than 75,742 red drum tags and 8,035 recapture records were reported for an overall recapture rate of 10.6 % (Tbl. 2).

The top tagging site in 2023 was Ft. Monroe (452 tags, 14.9% of effort, Tbl. 11). The Elizabeth River/Norfolk Ports, Waterfront area and Rudee Inlet were the top recapture sites (121 recaptures/each, Tbl. 12). From 1995-2020 the York River Hot Ditch was the top red drum tagging and recapture site (11,334 tags and 1,171 recaptures). In 2023, tagged red drum ranged in size from 6.5-52 inches TL, with the peak size for tagging at 14 inches TL (n=194, Fig. 5) and 24.6% (n=744) were adults (>18 in. TL). Historical patterns from 1995-2020 showed effort peaked at 15 inches TL (n=4,442 tags). Days at large for recaptures of red drum ranged from 0 to 599 days; one was tagged in 2021, 82 in 2022, and 131 were tagged in 2023.

Sheepshead:

In 2023, 123 sheepshead tags and 6 recaptures were reported (Tbl. 2). From 2000 to 2023 there were 1,905 sheepshead tags and 128 recaptures (Tbl. 2). The top tagging site in 2023 was the Anglo American Wreck, with 11.4% of total tagged sheepshead (Tbl. 13). This differs from 2000-2020 results, where the York River Hot Ditch was the top tagging location (32.7% of effort). The top sheepshead recapture site in 2023 was Long Creek (Tbl. 14). In 2023, tagged sheepshead ranged in size from 7.5-26.5 inches TL; 46.3% of these were adult fish (>14" TL). There was a peak in numbers of tagged sheepshead at 11 inches TL (n=14 tags, Fig. 6). This pattern differed from 2000-2020 size frequencies, where peak effort occurred at the 15 inch size class (n=4,442). Days at large for recaptures of sheepshead ranged from 9 to 94 days.

Spadefish:

There were 36 spadefish tagged in 2023 and no recaptures (Tbl. 2). There were over 7,853 spadefish tags and 796 recaptures reported over the past 28 years, for an overall recapture rate of 10.1% (Tbl. 2). The most popular tagging location in 2023 was The Gulf Hustler Wreck (9 tags, Tbl. 15). This differed from results from 1995-2020 as the Chesapeake Light Tower was the top tagging and recapture site (28.8% of tagging, 32.8% of recaptures). In 2023, tagged spadefish ranged in size from 6-18.5 inches TL with peak effort at 10 inches TL (n=5, Fig. 7). All of the tagged spadefish were within the mature size range (>4 in. TL).

Speckled trout:

From 1995-2023, more than 150,271 speckled trout tags and 3,330 recaptures were reported (2.2% overall recapture rate, Tbl. 2). In 2023, there were 7,204 tags and 91 recaptures reported; Ft. Monroe was the top tagging site (21.4% of effort, Tbl. 16). In terms of recaptures, the highest effort took place at the Elizabeth River Southern Branch (n=14, Tbl. 17). Historically, Ft. Monroe was the top tagging site (n=22,660); the top recapture site was the York River Hot Ditch (n=629) from 1995-2020. In 2023, tagged speckled trout ranged in size from 5.5-36 inches TL, with a peak at 11 inches TL (n=779, Fig. 8); 50.4% of tagged fish were adults (>12" TL). Peak effort from 1995-2020 also took place at the 11 inch size class (n=1,623). Fish recaptured in 2023 were at large from 0 to 428 days; of these, 23 were tagged in 2022, and 68 were tagged in 2023.

Tautog:

Through 2023, tagging effort on tautog has resulted in more than 25,373 tags (Tbl. 2). From this effort, there have been 3,918 recaptures (Tbl. 2) with an overall recapture rate of 15.4%. In 2023 alone, there were 828 tags and 185 recaptures. The top tagging site in 2023 was the Chincoteague Channel (10.5% of tags, Tbl. 18). The top recapture site was an Unknown Wreck/Structure off Chincoteague (n=40, 21.6% of recaptures, Tbl. 19). Historically, from 1995-2020 the Chesapeake Bay Bridge Tunnel Fourth Island was the top tagging site (n=1,552 tags) and the Cape Henry Wreck was the top recapture site (322 tags). In 2023, tagged tautog ranged in size from 7-32 inches TL, with the peak at 13 inches (n=75 tags, Fig. 9); 77.7% of tagged tautog were adults (>11.5" TL). Peak effort from 1995-2020 also took place at a similar size class (13 inches, n=2,377 tags). Tautog recapture data for days at large ranged from 0 to 3,655 days (including fish tagged in 2013 (n=1), 2014 (n=1), 2016 (n=1), 2019 (n=4), 2020 (n=5), 2021 (n=21), 2022 (n=72), and 2023 (n=60)). The recapture of the tautog tagged in 2013 set a new record for days at large for the program (n=3,655 days).

(Gray) Triggerfish:

During 2023 there were 49 gray triggerfish tags, and 9 recaptures (Tbl. 2). There were 1,924 triggerfish tags and 422 recaptures from 2001-2023 (Tbl. 2). Triggerfish had a high historical recapture rate of 21.9%. The top tagging location in 2023 was Santore Wreck (24.5% of effort, Tbl. 20). In previous years (2001-2020), False Cape was the top tagging site, (15.3% of effort). The highest number of recaptures in 2023 took place at the CBBT Third Island and the Santore Wreck (n=2 recaptures/each, Tbl. 21). Tagged triggerfish ranged in size from 8.75-19 inches TL, with the peak effort at 10.5 and 11 inches (n=85 tags/each length, Fig. 10); all fish were mature (>7.2" TL). Historically, peak effort from 2001-2020 took place at the 13 inch TL size class (n=177 tags). Days at large ranged from 14 to 75 days.

CONCLUSION

In 2023, the Tagging Program had a 16.3% decrease in the overall tagging (2023, n=14,992 tags; 2022, n=17,430 tags). Target species that had an increase in tagging included: black sea bass (n=1,743 tags, 320 recaptures); flounder (n=1,590 tags, 214 recaptures); and triggerfish (n=49 tags, 9 recaptures, Table 1). Species that had lower tagging numbers in 2023 included black drum (n=69 tags, 6 recaptures); cobia (n=323 tags, n=89 recaptures), red drum (n=3,027 tags, n=214 recaptures), sheepshead (n=123 tags, 6 recaptures); spadefish (n=36 tags, 0 recaptures), speckled trout (n=7,204 tags, 91 recaptures) and tautog (n=828 tags, 185 recaptures, Table 2).

In 2023, speckled trout led again as the top tagged species, making up 48.5% of tagging effort. Although adding significantly to the overall tagging numbers, the lower recapture rate of this species (~2.2%) has an impact on the overall recapture rate for the program. In response, the VGFTP continues to expand the use of experimental dart tags; recapture results from these tags suggest an improved recapture rate over the standard T-bar tags.

In 2023, the Virginia Game Fish Tagging Program set a new record for days at large. On March 23, 2013, Dr. Ken Neill tagged a 12.5-inch tautog at the Morgan Wreck. This fish was initially recaptured by another VGFTP volunteer tagger, Mr. Wally Veal, at the Morgan Wreck on January 22, 2017, and measured 16 inches at the time. However, it was the most recent recapture that made the fish a record breaker. The tautog was last recaptured on March 26, 2023, by Mr. Andrew Homer at Triangle Wreck (part of the same complex as Morgan Wreck) and measured 22 inches long. This recapture marked a new record of 3,655 days at large (more than 10 years!) for a VGFTP-tagged fish.

Overall, VGFTP data provide movement and site-fidelity patterns of fishes captured and released in Chesapeake Bay and Atlantic coastal waters and serve as an important source of information for marine fisheries management. In the past 28 years, more than 600 taggers have been trained and participated in the program and fishing effort has been documented at over 900 locations in Virginia waters.

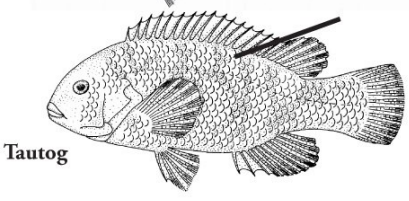

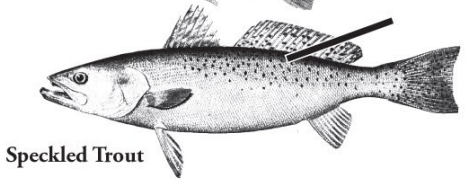

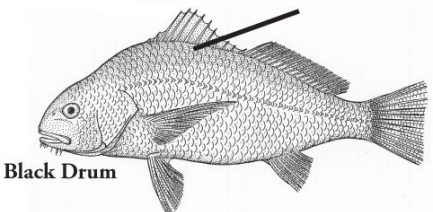

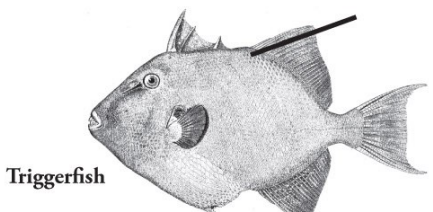

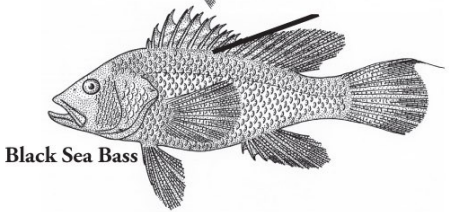

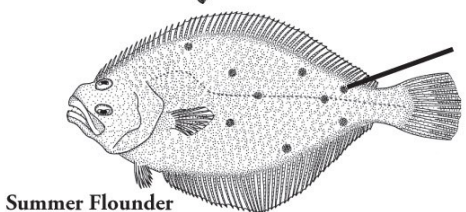

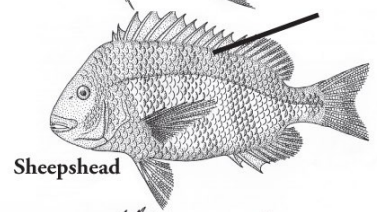

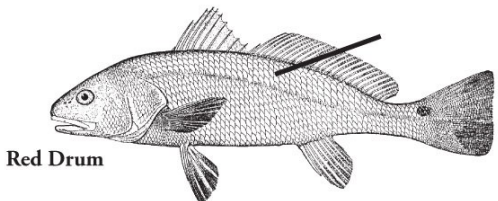

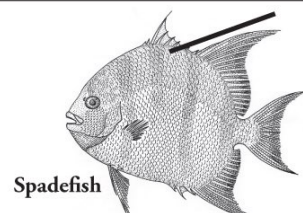

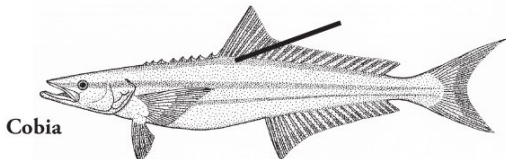

Figure data in this report are accurate as of April 30, 2024. Future analysis of long-term trends in the VGFTP data will continue with the most recent results available online: <http://www.vims.edu/vgftp/>. This report is considered a “living” document with updated versions posted at the website above.

Appendix D:

2023 Tag Recaptures by Species

1. Multiple recaptures are distinguished **in bold** for individual fish by the records having IDENTICAL Tag Numbers and Tag Dates. *Note: abbreviated tag numbers are shown in this Appendix.
2. Multiple recaptures are listed in sequential order, with the most recent recapture listed last on the Tag Number column. Multiple recaptures often document the location of the fish over two different or distinct times. However, two (or more) recaptures of the same tagged fish can occur on the same day and even the same location. These types of events document good tagging and release survival rates for the species.
3. Multiple recapture data provide especially valuable information. This information can only be recorded when anglers write down and report the tag number as soon as possible, then release the fish with the tag still in place.

TagSpecies	Tagger	TagNo4	TagDate	TagLocation	TagLgth	RecapDate	RecapLocation	RecapLgth	RecapAngler	RecapFishFate	DaysOut
Black Drum	HOGGARD, WILLIAM KELLY	4805	9/26/2021	Sandbridge Surf/Back Bay Surf	8.5	1/2/2023	Surf City-Topsail Island, NC	21	JOE BELL	KILLED	463
