

CJ Patrick *et al.* – Supporting Information

**WebFigure 2.** Complete parameterized structural equation model (SEM) for the combined dataset. Arrow thickness denotes relationship strength. Numbers on arrows are standardized correlation coefficients. Red arrows indicate negative relationships; black arrows indicate positive relationships.  $R^2$  values for each endogenous variable are depicted adjacent to the box. The high  $P$  value indicates that the model is not significantly different from the data (ie the model is a good fit).
